## SHIPPING INSTRUCTIONS:

Shipping a Radio in for repair:

1. **Use a corrugated box.** Please use a box big enough to allow for an adequate amount of packing material to protect all sides of the unit. If using a box that has already been used before, please strip all previous shipping labels from box.
2. **Provide Internal Protection.** Wrap each unit separately. If you are placing more than one unit in one box, each item should be wrapped well, and then additional packaging material should go between units to further protect them from damage during shipping. A rule of thumb is that there should be 2-4 inches of packing material on all 6 sides of the box, between the units and the sides of the box. Many things can be used for packing material such as; foam peanuts, bubble wrap, newspaper, etc.
3. **Include Repair Form.** Before sealing your box, make sure you put a copy of the repair form in a packing slip sleeve, or in the box, preferably rubber-banded to the unit to be repaired. Please keep a copy of the repair form for your records as well.
4. **Close Box Securely.** Make sure the box is sealed tight with water-activated paper tape or plastic packaging tape.
5. **Label Box.** The shipping label below is provided for your convenience.
